Cost-effective servicing for favorable total cost of ownership

Eco Log's E series harvesters and forwarders offer completely new opportunities for efficient operation and servicing, in terms of both time and money. Thanks to the new Volvo engine with a service interval of one thousand hours, the E series machines can operate for twice as long as their predecessors before each service.

Product development for easier access and improved serviceability minimizes downtime, thereby increasing the machine's production time significantly.

- Eco Log's E series reduces service costs by 25% compared to earlier harvester and forwarder generations.
- Easy, fast servicing results leads to improved productivity thanks to greater machine uptime.
